

Cyclonator®

Vac-Curb

Turn any parking lot into a closed-loop wash rack

Any asphalt or concrete covered area, indoors or outdoors, can be quickly and easily converted into a wash pad with 100% containment. Addition of the Cyclonator® filtration system turns the pad into a closed-loop recycling wash rack with zero discharge to the environment.

Wash pad can be any size. Stainless steel forms bolt down to make a continuous barrier of any size up to 100' x 200'.

Low 1" high curb gives all vehicles easy access.

Heavy duty stainless steel construction means the heaviest trucks can drive over the curb.

Shovel or scoop-up excess mud with a shovel or a bobcat.

Avoid EPA fines by containing and controlling effluent and avoiding stormdrain discharge.
